1. Purpose and background

Since the upgrade to SAP S/4HANA 2023 (FPS01) on 12 October, about 40% of vendor invoices posted with MIRO are blocked for payment with reason "price variance", although the purchase order price and the invoice price match.

This document describes what the business needs so a consultant can find the cause and fix it.

2. Business objectives and success criteria

- Invoices whose price matches the purchase order are no longer blocked (target: fewer than 2% blocked for price).
- Blocked invoices from October are released without manual re-posting.
- Month-end close on To be confirmed: closing date for October is not delayed.

3. Scope (in scope / out of scope)

In scope

- Invoice verification (MIRO, MRBR) for company codes 1000 and 2000.
- Tolerance keys PP and PS.

Out of scope

- Changes to the purchasing approval workflow.
- Freight invoices posted in transaction MRKO.

4. Current situation (AS-IS) and desired situation (TO-BE)

AS-IS: invoices are blocked with block reason R; the AP team releases them one by one in MRBR (about 3 hours per day).

TO-BE: only invoices with a real price difference above tolerance are blocked; the others are posted free for payment.

5. Stakeholders and roles

Role	Responsibility
AP manager (requester)	Confirms the business rules and tests
Procurement lead	Confirms purchase order price conditions
SAP consultant	Analysis, fix, transport

6. Functional requirements

The requirements below must be met before the change is accepted.

ID	Requirement	Priority	Status	Owner	Acceptance criteria
REQ-001	The system compares the invoice price with the net purchase order price after discounts.	Must	Agreed	SAP consultant	An invoice with a matching price posts without a block in 50 test cases.
REQ-002	Blocks remain for price differences above 2% or SAR 500.	Must	Proposed	Accounts payable	An invoice 3% above the PO price is blocked with reason R.
REQ-003	A report lists October invoices that can be released automatically.	Should	Proposed	SAP consultant	The list is reviewed and approved by the AP manager.

7. Non-functional requirements

- Audit: every change of tolerance settings is recorded in the change log of the configuration transport.
- Performance: MIRO posting time stays below 3 seconds.

8. SAP landscape and technical context

- System: SAP S/4HANA 2023 FPS01, on-premise; landscape DEV → QAS → PRD.
- Modules: MM-IV, FI-AP.
- Integrations: To be confirmed: is the OCR invoice inbound interface involved?

9. Data and migration needs

No data migration. Blocked invoices from October (about 1,200) must be re-checked with the corrected rules.

10. Assumptions, constraints and dependencies

- The issue started with the upgrade; no tolerance key was changed by the business.
- Test data can be copied to QAS.

11. Risks and mitigations

Risk	Mitigation
Releasing invoices that really have a price difference	Run the re-check in QAS first and review the list with AP
Month-end delay	Fix before To be confirmed: date

12. Testing and acceptance approach (UAT)

1. Unit test in DEV with 10 sample purchase orders.
2. UAT in QAS by the AP team with 50 real invoices (price matching, above and below tolerance).
3. Sign-off by the AP manager.

13. Timeline and urgency

Urgency: high. Target: fix in production within 5 working days.

14. Open questions

- Which exact SAP Notes were already tried?
- To be confirmed: are planned delivery costs part of the price check?

15. Attachments and references

- Screenshot of the MRBR list (attached to the ticket)
- Tolerance settings export (OMR6)

16. Change log

Version	Date	Status	By	Note
v3	2026-10-24	Final	Client	Approved for the consultant
v2	2026-10-23	Draft	Client	Answered the open questions about company codes
v1	2026-10-22	Draft	Client	First draft from the ticket
